# All companies across all sectors can benefit from Keytracker® products to manage any keys & equipment.

Keytracker® are the leading supplier of key and equipment management systems. From the simple and costeffective mechanical peg-in peg-out board to fully integrated intelligent locker systems, Keytracker® has a solution to meet any management requirements. Companies currently benefitting from Keytracker®, effectively manage building keys, vehicle keys and equipment, without the time-consuming task and hassle of administration. For more information about any of the products Keytracker® supply, contact a member of the sales team on 0121 559 9000 or email us at sales@keytracker.co.uk.

### Keytracker® Peg-in Peg-out Board

The simple and cost-effective way to manage keys with user traceability.

Our range of products are designed and built to provide the most secure methods for managing keys. These systems include a variety of options to suit the specific needs of your business. Some of our available key box solutions include: Padlock storage bar, Secure key cabinet, Key drop box and Single key units

Mechanical key systems provide a reliable solution for managing and tracking keys, tools, and equipment. These systems do not rely on complicated electronic software. They offer a secure option that is built to last and suitable for a wide range of environments, including industrial settings. Using a simple peg-in, peg-out solution, you grant authorised users personalised access pegs. These pegs need to be inserted to remove a key, allowing you to track who has removed a key. While these systems are simple, they are effective at monitoring and tracking key usage. Consider implementing a key tracker system with a secure cabinet, drop box, or collection box. We also have single units and padlock storage bars. We even carry a single-unit. These individual units can be secured to walls or cabinets to prevent unwanted access to equipment and locks. They also use a peg system to provide simple and efficient access control.

### Electronic Key Cabinet Management Systems

Secure and track your keys with a Keytracker® electronic key control

Use an Electronic Locker to secure

your business devices. Gain more

control over access to these

valuable electronics.

Our selection of high-quality electronic key cabinets ensure that your keys are always secure or tracked. These systems are also easy to use so that your keys remain quickly accessible for your staff. Each user gets a unique login that they input on the control panel on the electronic key box. All transactions are automatically logged and submitted to an advanced key management software application. The intelligent cabinet is available in a variety of sizes. The large control panel is easily accessible by your employees, providing quick and secure access to keys or other items. You may even incorporate RFID technologies for greater access control. With RFID tags, you can tag individual equipment or keys and track their location throughout your building as they are transported past carefully positioned RFID scanners.

We also partner with ECOS systems to deliver the most secure, innovative key storage solutions available in the UK. We can work with your business to ensure that you have a secure option for keeping track of your keys.

KT Lockers

### Coventry City Council

Coventry City Council Passenger Transport Services department provides transportation options to more than 500 people per day in the region. Services include social care transport, home to school transport for children and young people with special educational needs, personalised transport for those with mobility issues, linen services for those cared for and medical collection and delivery services.

With more than 250,000 trips per year managing keys to the variety of vehicles that are used to provide these excellent transportation services can be a challenge. Coventry City Council were using a paper based system for recording the use of vehicles and driver or escort shifts, the issues this presented included potential for inaccurate records, time spent chasing up vehicle key whereabouts and the risk of losing data, and also time consuming overtime calculations. Coventry City Council implemented Keytracker's in house developed Key Control Software which allows users to digitally record all key movements from any location, on any device.

The software was developed to be personalised to Coventry City Council and the Passenger Transport Management team use the system to track and manage vehicles for the purposes of maintenance and the driver and escort working hours to ensure that the correct hours are calculated and enhance the safety of employees.

Jeremy Barnes, passenger transport supervisor at Coventry City Council said: "The system has saved the team time recording and locating vehicle keys in the fleet, it has also made the reporting process we follow more accurate especially in the calculations of staff overtime claims.

More organisations are relying on handheld devices to perform a variety of tasks. From warehouse inventory management to customer support, devices have many functions. They are also often expensive and difficult to track. An electronic safe locker is a perfect solution for securing, managing and tracking business devices. Any item that is valuable to your daily operations can be stored inside the locker. The items are then loaned out to employees as needed, using the built-in touchscreen display. Each employee has their own login so that you can track who has borrowed each device and when the devices were borrowed. These lockers help provide greater accountability. Expensive devices, tools, and

equipment are less likely to get lost or stolen. Using a locker does not slow down your operations. The interface is easy to use, allowing employees to quickly get the equipment that they require. In fact, these solutions are often faster than manual methods of checking out equipment. With your own electronic locker, you get the flexibility to manage multiple handheld devices and equipment without the typical administrative challenges.

"By using the Keytracker software, we can find the status of a vehicle at any time and from any location, this means we operate more effectively and therefore provide a better service to our customers. The service from Keytracker has been excellent, when we have needed assistance it has been quick and professional, we would recommend to anyone.

The system is so simple to use but provides so many benefits I would recommend it to anyone and the before and after sales service has been very impressive, a pleasure to deal with."

### Gleneagles Hotel

World famous luxury hotel, spa and golf-course, Gleneagles, were in need of a secure and modern system to track and monitor their keys to the numerous facilities throughout the estate. Signing keys in and out on paper was no longer up to standards for such a large business and vast amounts of valuable time was wasted completing this outdated key issuing process.

A new key management system was required to meet the high standards of security for such a popular and well-known travel destination. The system would also have to allow more control over who has access to the keys, and would also have to improve efficiency for staff, allowing them to work smarter.

After much research, discussion and evaluation, Gleneagles decided upon Keytracker to implement their key management systems. On recommendation

### Peg-In Peg-Out Board - How it works...

Insert your personal colour Twist to release coded access peg..

the desired key...

Remove key. Access peg cannot be removed until the key is returned.

### Key Control Software

Track your keys and equipment movements in detail by monitoring your staff and keys in an easy-to-use, web-based software.

Key Control Software (KCS) has been designed to track keys or any barcoded items in, out and even between sites. Multiple users can access the software through any of the many compatible internet browsers at anytime, anywhere and on any smart device.

### Gleneagles Hotel purchased 3 Keytracker electronic key systems which integrate directly with their existing

access control system.

Now 500 staff accessing keys save on average 5 to 15 minutes per day each, when checking keys in and out of the 3 remote locations. Alleviating the unnecessary pressure of issuing a large amount of keys from security allows the teams to work efficiently, without concern for key security or access.

Security Manager, Derek McQueen at Gleneagles Hotel said: "The Keytracker system has increased security of key sets and improved our day-to-day operations Generating reports on all keys to audit usage is easy and a great deal of time is saved for the approximate 500 users, saving anywhere from 5 to 15 minutes each, per day."

After delivery, installation and the bedding-in period of the Keytracker systems, Derek McQueen said: "First class. Adam Smith and the team couldn't have been more helpful."
